

Polycarbonate Panels

Polycarbonate sheets are hail and wind resistant, flame resistant and energy efficient. Ideal applications for polycarbonate panels are for windows, greenhouses, agricultural outbuildings, as roofs over patios, walkways and terraces, for sound insulation barriers and as skylight and sidelight panels to filter ultraviolet sunlight. They can even be used for interior and exterior architectural applications and office and commercial partitions

Polycarbonate Twin Wall Panels

Polycarbonate Twinwall Panels are a high performance roofing sheet which has been designed for industrial, commercial, architectural and domestic applications where insulating glazing is required. These polycarbonate sheets have cellular structures that provide the product with insulation and resistance.

Protected from ultraviolet rays by co-extrusion of U.V. on the outside face. Twinwall Polycarbonate Panels are perfect for applications requiring a material that offers high light transmission, thermal insulation, lightness of weight with strength, high shock resistance, flame retardance, and design flexibility.
