

Perforated Acoustical *Steel Liner*

Optimal Noise Control & Protection

Ever tried to have a conversation in your shop while someone's driving the Combine back inside? Sometimes even the regular sounds of power tools in the shop can echo loudly and produce that sharp ringing in you ears. Perforated Acoustical Steel Liner Panels can have immense reductions in noise throughout any structure by as much as 50% and pay off huge dividends in hearing protection.

Architectural Accents & Custom Trim

Perforated Steel Panels can also provide opportunities for custom architectural design accents on any type of building as well as custom trims, ceiling panels, soffit applications and more. Contact Forma Steel to discuss ideas to incorporate perforated steel into your next design to #createsomethingamazing

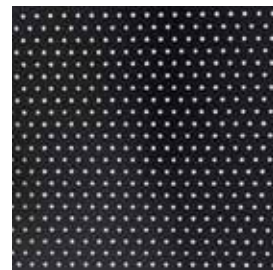

Our perforated steel is available in Bright White 29ga to pair with our most popular rollformed profiles for acoustic liner applications. We also stock 24ga perforated steel in both Charcoal and Black to support other architectural cladding applications.
